INNOVATION

# AMERICAN ROAD PATCH

Allows quick effective repairs to road potholes without lengthy delays and digging up roads. Current method of cold mix does not address the issue of keeping water out. The patch system embeds into the roadway forming a waterproof seal.

## THE ISSUE

Storm events have seen an increase in potholes forming across the base. Due to traffic flow, it is not always feasible to take a road offline for an extended period. Urgent repairs will minimize the hole from increasing in size and damage to vehicles.

## THE SOLUTION

A quick road patch would provide a stable road base and prevent further water ingress into the hole. This would also allow the road to stay open without the need for diversions.

**PEEL & SEAL**  
**Pavement Patch**

**American Road Patch™**

Searls, strengthens & contains repairs

## WHY IS THIS AN INNOVATIVE SOLUTION?

The patch comes in rolls 6.4Sqm per roll, which can be cut to size with a Stanley knife to suit the size of the hole.

The Patch can be driven over immediately after adhesion & compaction, this will minimize delays to traffic flow.

The American Road Patch provides a cheap, efficient and long-lasting solution to a challenging issues on our roadways.

Easy to install providing little to no impact on road users.

## INVESTMENT / FINANCIAL

roll 6.4Sqm cost \$615.00 Excl GST

Coldmix 20Kg Bucket \$75.00 Excl GST Plus  
hire of compactor

## MEASURE OF SUCCESS

The patch has been installed at RAAF Williamtown A0501. Current monitoring and wet weather events are yet to impact its performance
